Projects

Continuous Sign Language Recognition and Cross-Sign Conversion ***Apr 2026***

- Developed a system to recognize continuous Indian Sign Language (ISL) and convert it into text for better communication with non-signers using BilSTM amd converts ISL gestures into Other Sign Language for broader accessibility.
- Implemented Huffman-based segmentation, MediaPipe keypoint extraction, Bi-LSTM sequence modeling, and 3D avatar-based cross-sign translation.
- Integrated Transformer-based sentence generation and 3D avatar-based cross-sign translation.
- **Tech Stack:** Python, MediaPipe, Three.js, Flask,

Osteoporosis Prediction System ***Sep 2025***

- Developed a machine learning system to predict osteoporosis risk from clinical and ultrasound-based features.
- Applied data preprocessing, feature selection, and ensemble machine learning techniques to improve prediction performance.
- Achieved 97% binary prediction accuracy and 92% multi-class classification accuracy for osteoporosis risk assessment.
- **Tech Stack:** Python,Streamlit,pandas

Order and Inventory Management System ***Apr 2024***

- E-commerce web app that manages inventories and streamlines ordering and billing.
- Designed a relational database system to manage products, customers, orders, inventory, and billing for a retail shop.Enabled real-time purchase, cart management, and order processing, reducing manual effort by 70
